General:

Most of you had a lecture on basic programming ...
 performance was not an issue

General:

► Most of you had a lecture on basic progamming . . . performance was not an issue

► Here it is going to be:

General:

- ► Most of you had a lecture on basic progamming . . . performance was not an issue
- Here it is going to be:
 - 1. How fast is our program?

General:

Most of you had a lecture on basic programming ...
 performance was not an issue

- Here it is going to be:
 - 1. How fast is our program?
 - 2. How can we make it faster?

General:

- ► Most of you had a lecture on basic progamming . . . performance was not an issue
- Here it is going to be:
 - 1. How fast is our program?
 - 2. How can we make it faster?
 - 3. How can we proof that it will always be that fast?

General:

- ► Most of you had a lecture on basic progamming . . . performance was not an issue
- Here it is going to be:
 - 1. How fast is our program?
 - 2. How can we make it faster?
 - 3. How can we proof that it will always be that fast?
- Important issues:
 - Most of the time: application runtime
 - ► Sometimes also: resource / space consumption

Algorithms:

Algorithms:

- Sorting
- Dynamic Arrays
- Associative Arrays
- Hashing

- Priority Queue
- Linked Lists
- Pathfinding / Dijkstra Algorithm
- Search Trees

Algorithms:

- Sorting
- Dynamic Arrays
- Associative Arrays
- Hashing

- Priority Queue
- Linked Lists
- Pathfinding / Dijkstra Algorithm
- Search Trees

Mathematics:

Algorithms:

- Sorting
- Dynamic Arrays
- Associative Arrays
- Hashing
- **Mathematics:**
- Runtime analysis
- ▶ O-Notation

- Priority Queue
- Linked Lists
- Pathfinding / Dijkstra Algorithm
- Search Trees

Proof of correctness

After the lecture . . .

... you should be able to understand the joke

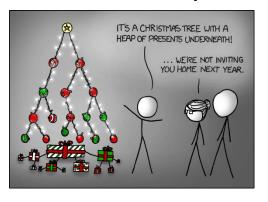

Figure: Comic © xkcd/835

After the lecture . . .

... you should be able to understand the joke

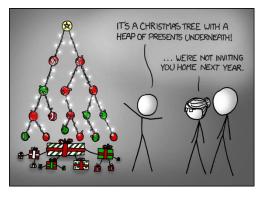

Figure: Comic © xkcd/835

Hopefully your parents will still invite you

Lecture:

- ► Tuesday, 12:00 14:00, HS 00 006, Build. 082
- Recordings of the lecture will be uploaded to the webpage

Exercises:

- One exercise sheet per week
- Submission / Correction / Assistance online
- ► Tutorial: (if needed)
 Wednesday, 13:00-14:00 HS 00 006, Build. 082

Exam:

 Planned: Sa. 23th March 2019, 10:00-12:00, Build. 101, Lec. theater 026 & 036

Exercises:

▶ 80 % practical, 20 % theoretical

Exercises:

- ▶ 80 % practical, 20 % theoretical
- ▶ We expect **everyone** to solve **every** exercise sheet

Exercises:

- ▶ 80 % practical, 20 % theoretical
- ▶ We expect **everyone** to solve **every** exercise sheet

Exam:

Exercises:

- ▶ 80 % practical, 20 % theoretical
- We expect everyone to solve every exercise sheet

Exam:

▶ 50 % of all points from the exercise sheets are needed

Exercises:

- ▶ 80 % practical, 20 % theoretical
- We expect everyone to solve every exercise sheet

Exam:

- ▶ 50 % of all points from the exercise sheets are needed
- ▶ Content of exam: Whole lecture and all exercises

Exercises:

► Tutors: Tim Maffenbeier, Till Steinmann, Tobias Faller

Exercises:

- ► Tutors: Tim Maffenbeier, Till Steinmann, Tobias Faller
- Coordinators: Michael Uhl, Florian Eggenhofer and Björn Grüning

Exercises:

- ► Tutors: Tim Maffenbeier, Till Steinmann, Tobias Faller
- Coordinators: Michael Uhl, Florian Eggenhofer and Björn Grüning
- ▶ Deadline: ESE: 1 week, IEMS: none

Exercises:

Post questions into the forum (link later)

Exercises:

- Post questions into the forum (link later)
- ► Submission via "commit" through svn and Daphne

Exercises:

- Post questions into the forum (link later)
- ▶ Submission via "commit" through svn and Daphne
- ► Feedback one week after deadline through "update" (svn)

Organisation - Exercises 3 / 5

Exercises:

- Post questions into the forum (link later)
- Submission via "commit" through svn and Daphne
- ► Feedback one week after deadline through "update" (svn)
- Unit test / checkstyle via Jenkins

Organisation - Exercises 4 / 5

Exercises - Points:

- Practical:
 - ▶ 60 % functionality
 - ▶ 20 % tests
 - ▶ 20 % documentation, Checkstyle, etc.
 - ► Program is not running ⇒ 0 points

Organisation - Exercises 4 / 5

Exercises - Points:

- Practical:
 - ▶ 60 % functionality
 - ▶ 20 % tests
 - ▶ 20 % documentation, Checkstyle, etc.
 - ▶ Program is not running ⇒ 0 points
- ► Theoretical (mathematical proof):
 - ▶ 40 % general idea / approach
 - ▶ 60 % clean / complete

Organisation 5 / 5

Effort:

- ▶ 4 ECTS (ESE), 6 ECTS (IEMS)
- ▶ 120 / 180 working hours per semester
- ▶ 14 Lectures each 6 h / 8 h + exam
- ▶ 4 h / 6 h per exercise-sheet (one per week)

Daphne

Daphne:

- Provides the following information:
 - Name / contact information of your tutor
 - Download of / info needed for exercise sheets
 - Collected points of all exercise sheets
 - Links to:
 - 1. Coding standards
 - 2. Build system
 - 3. The other systems
- ► Link: Daphne

Forum

Forum:

- Please don't hesitate to ask if something is unclear
- ► Ask in the forum and not separate. Others might also be interested in the answer
- ► I, Claudis Korzen or one of the tutors will reply as fast as possible
- ► Link: Forum

Checkstyle flake8

Checkstyle / Linting (flake8):

- ▶ Installation: python3 -m pip install flake8
- ► Check file: python3 -m flake8 path/to/files/*.py
- ► Link: flake8

Why unit tests?

1. A non-trivial method without an unit test is probably wrong

Why unit tests?

- 1. A non-trivial method without an unit test is probably wrong
- 2. Simplifies debugging

Why unit tests?

- 1. A non-trivial method without an unit test is probably wrong
- 2. Simplifies debugging
- 3. We and you can automatic check correctness of code

Why unit tests?

- 1. A non-trivial method without an unit test is probably wrong
- 2. Simplifies debugging
- 3. We and you can automatic check correctness of code

What is a good unit test?

Why unit tests?

- 1. A non-trivial method without an unit test is probably wrong
- 2. Simplifies debugging
- 3. We and you can automatic check correctness of code

What is a good unit test?

Unit test checks desired output for a given input

Why unit tests?

- 1. A non-trivial method without an unit test is probably wrong
- 2. Simplifies debugging
- 3. We and you can automatic check correctness of code

What is a good unit test?

- Unit test checks desired output for a given input
- At least one typical input

Why unit tests?

- 1. A non-trivial method without an unit test is probably wrong
- 2. Simplifies debugging
- 3. We and you can automatic check correctness of code

What is a good unit test?

- Unit test checks desired output for a given input
- At least one typical input
- ▶ At least one critical case E.g. double occurrence of a value in sorting

doctest

Testing (doctest):

```
Tests are contained in
def subOne(n):
    """ Subtracts 1 from n
                                  docstrings
   >>> subOne(5)
   >>> subOne(3)
    return n-2
if __name__ == "__main__":
    print("2 minus 1: %d" % subOne(2))
```

doctest

Testing (doctest):

```
def subOne(n):
    """ Subtracts 1 from n
   >>> subOne(5)
   >>> subOne(3)
    return n-2
if __name__ == "__main__":
    print("2 minus 1: %d" % subOne(2))
```

- Tests are contained in docstrings
- ► Module doctest runs them

doctest

Testing (doctest):

```
def subOne(n):
    """ Subtracts 1 from n
   >>> subOne(5)
   >>> subOne(3)
    return n-2
if __name__ == "__main__":
```

- Tests are contained in docstrings
- Module doctest runs them
- Run check with: python3 -m doctest path/to/files/*.py -v

```
-__name__ == "__main__":
print("2 minus 1: %d" % subOne(2))
```

Version management

Subversion

Version management (subversion):

- Keeps a history of code changes
- ▶ Initialize / update directory: **svn** checkout <URL>
- Add files / folders: svn add <file> --all
- Create snapshot: svn commit -m "<Your Message>" Data is uploaded to Jenkins automatically
- ► Link: Subversion

Jenkins

Jenkins:

- Provides our build system
- You can check if your uploded code runs
 - Especially whether all unit test pass
 - And if checkstyle (flake8) is statisfied
- Will be shown in the first exercise
- ► Link: Jenkins

Sorting

Minsort

Heapsort

Sorting 1 / 2

Problem:

- ▶ Input: n elements x_1, \ldots, x_n
- ► Transitive operator "¡" which returns true if the left value is smaller than the right one
 - ▶ Transitivity: x < y, $y < z \rightarrow x < z$
- ▶ Output: $x_1, ..., x_n$ sorted with operator

Sorting 1 / 2

Problem:

- ▶ Input: n elements x_1, \ldots, x_n
- ► Transitive operator "¡" which returns true if the left value is smaller than the right one
 - ▶ Transitivity: x < y, $y < z \rightarrow x < z$
- ▶ Output: $x_1, ..., x_n$ sorted with operator

Example

Input: 14, 4, 32, 19, 8, 44, 65 Output:

Sorting 2 / 2

Why do we need sorting?

- ► Nearly every program needs a sorting-algorithm
- Examples:
 - Index of a search engine
 - Listing filesystem in explorer / finder
 - ► (Music-) Library
 - ► Highscore list

Minsort - Algorithm

Minsort in Python:

```
def minsort(lst):
    for i in range (0, len(lst)-1):
        minimum = i
        for j in range(i+1, len(lst)):
             if lst[j] < lst[minimum]:</pre>
                 minimum = j
         if minimum != i:
             lst[i], lst[minimum] = \
                 Ist [minimum], Ist [i]
    return Ist
```

How long does our program run?

We test it for different input sizes

How long does our program run?

We test it for different input sizes

Table: Runtime for Minsort

n	Runtime / ms
2×10^3	5.24
4×10^3	16.92
6×10^3	39.11
8×10^3	67.80
10×10^3	105.50
12×10^3	150.38
14×10^3	204.00
16×10^3	265.98
18×10^3	334.94

How long does our program run?

- We test it for different input sizes
- ► Observation:
 It is going to be
 "disproportional"
 slower the more
 numbers are being
 sorted

Table: Runtime for Minsort

n	Runtime / ms
2×10^3	5.24
4×10^3	16.92
$6 imes 10^3$	39.11
8×10^3	67.80
10×10^3	105.50
12×10^3	150.38
14×10^3	204.00
16×10^3	265.98
18×10^3	334.94

How long does our program run?

- We test it for different input sizes
- Observation:

It is going to be "disproportional" slower the more numbers are being sorted

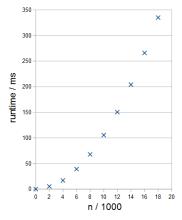

Figure: Runtime of Minsort

Runtime analysis:

- As a first example serves this diagram for Minsort
 - ► Thats what you should do in the first exercise sheet

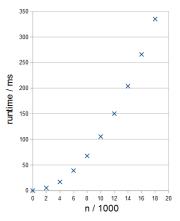

Figure: Runtime of Minsort

Runtime analysis:

- As a first example serves this diagram for Minsort
 - Thats what you should do in the first exercise sheet

We observe:

- ► The runtime grows faster than linear
- With double the input size we need four times the time

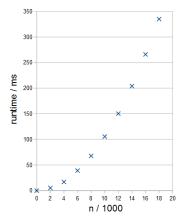

Figure: Runtime of Minsort

Runtime analysis:

- As a first example serves this diagram for Minsort
 - Thats what you should do in the first exercise sheet

▶ We observe:

- ► The runtime grows faster than linear
- With double the input size we need four times the time

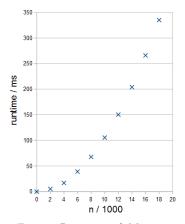

Figure: Runtime of Minsort

▶ Next lecture we will analyze deeper with other methods

Figure: Heapify lower layer

Figure: Heapify upper layer

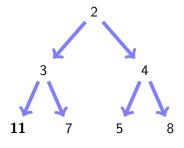

Figure: Resulting heap

Finding the minimum is intuitive:

- ▶ Minsort: Iterate through all non-sorted elements
- ► **Heapsort:** Finding the minimum is trivial (concept)

 Just take the root of the heap

Finding the minimum is intuitive:

- ▶ Minsort: Iterate through all non-sorted elements
- ► **Heapsort:** Finding the minimum is trivial (concept)

 Just take the root of the heap

Removing the minimum in Heapsort:

- Repair the heap and restore the heap property
 - We don't have to repair the whole heap
- More of this in the next lecture
